PROFESSIONAL SUMMARY

Product Engineer with 3+ years of hands-on frontend experience across **Vue.js, React.js, JavaScript, and TypeScript**, backed by 10+ years of experience in software engineering and quality engineering. Experienced in building and improving business-critical applications with a strong focus on scalable solutions, performance, usability, and quality.

Own features end-to-end, from understanding requirements and designing solutions to implementation, testing, monitoring, and production support. Strong at simplifying complex workflows, improving application performance, and collaborating with product, engineering, and business teams to deliver reliable, user-focused solutions.

Bring a **quality-first engineering mindset** with deep experience in **test automation, API testing, CI/CD, and software quality**, enabling me to build frontend solutions with reliability and maintainability in mind.

SKILLS

Frontend: Vue.js (Vue 3), React.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Quasar

Test Automation: Cypress, BDD/Cucumber, Framework Design, Continuous Testing

API & Database: REST APIs, Postman, SQL, API Testing, Integration Testing, Database Validation

Quality Engineering: Functional, Regression, End-to-End, UAT, Exploratory, Mobile/Web Testing, Performance Testing, Test Strategy, Risk-Based Testing, Quality Gates, RCA, Defect Management, Defect Trend Analysis

Product & Engineering: Requirement Analysis, User Workflows, Component Architecture, Performance Optimization, Stakeholder Collaboration, CI/CD

Cloud & DevOps: Git, GitHub Actions, CircleCI, Docker, Kubernetes, AWS, ArgoCD, Helm, Terraform, Grafana, Datadog

AI-Assisted Engineering: GitHub Copilot, Cursor, CodeRabbit, Prompt Engineering

Tools & Practices: Jira, GitHub, Figma, JMeter, Agile, SDLC, Extreme Programming

---

WORK EXPERIENCE

Product Engineer

Hello Chef, Dubai | *Dec 2022 – Apr 2026*

- Led end-to-end delivery of **business-critical product initiatives**, translating requirements into scalable solutions that simplified operational workflows and reduced manual effort.
- Built and enhanced **Vue 3 / TypeScript frontend features,** improving usability, maintainability, and efficiency across internal operations platforms.
- Led the **Vue 2 → Vue 3 migration**, improving frontend performance and maintainability by **20–30%** and establishing a more scalable application foundation.
- Optimized critical workflows, **reducing recipe load time from 10.35s to 140ms (~98% faster)**, recipe cloning time by **~40%** and recipe creation time by **~65%**.
- Increased automated regression coverage from **0% to 75% using Cypress**, reducing regression effort from **6 hours to 2 hours** and integrating automated tests into CI/CD for faster release feedback.
- Reduced **critical and major defects by 50%** through shift-left testing, API/integration validation, proactive defect triage, and stronger end-to-end release validation.
- Established **18 SLOs across 3 critical services** and automated engineering workflows, including Datadog observability, DORA/XmR KPI tracking, and a Production-to-Staging database copier, reducing data-copy time by **~65% (20 → 7 minutes)**.

Senior Manager – QA & Automation

Morgan Stanley, Mumbai | *Aug 2017 – Nov 2022*

- Enhanced Cypress/BDD Cucumber automation frameworks, reducing **functional + regression testing effort from 8 days to 5 days (~38%)**, enabling comprehensive validation within a 2-week sprint release cycle.
- Led QA strategy, automation and release validation for **2 critical financial applications** within a global banking environment, supporting reliable delivery across business-critical and regulatory initiatives.
- Led risk-based test planning, functional, integration and regression testing, defect triage and production validation, improving release readiness across frequent sprint releases.
- Delivered critical regulatory initiatives including **MiFID II and Brexit**, achieving **zero high-severity production defects across 2 critical applications**.
- Translated complex business requirements into comprehensive test scenarios and automation coverage, partnering with Business, Development and QA stakeholders to improve requirement coverage and reduce testing gaps.
- Established reusable QA practices, quality standards and automation approaches, supporting consistent testing practices and increased automation adoption across the team.
- Mentored **10+ QA engineers**, accelerating automation adoption and supporting consistent QA practices across globally distributed teams.
- Coordinated QA delivery across **2 critical applications and 8 distributed team members across India, UK and US**, managing dependencies, risks and competing priorities across releases.

Module Lead – QA & Automation

Persistent Systems, Pune | *Dec 2012 – Apr 2017*

- Delivered end-to-end QA and automation for complex **web and mobile applications** across financial technology environments, supporting reliable releases through functional, integration, regression and performance validation.
- Built automation scripts and API validation using **JavaScript, Postman and REST services**, expanding automated coverage across critical application workflows.
- Validated backend data and business logic using **SQL**, identifying data integrity issues across complex transactional workflows.
- Conducted **JMeter performance testing with workloads up to 500 concurrent users**, including load, spike and longevity testing; analyzed **response time and throughput** to identify performance bottlenecks and validate application behaviour under varying workloads.
- Led defect tracking, debugging and release validation in Agile environments, partnering with Development teams to resolve issues and improve release quality.
- Collaborated with Development and QA teams to improve testing practices and streamline validation across complex application workflows.

EDUCATION

Bachelor of Engineering (B.E.) in Computer Science | St. Francis Institute of Technology, University of Mumbai, India

---

COURSES & CERTIFICATIONS

- Extreme Programming Explained: Embrace Change
- Microsoft Certified: Azure Fundamentals
- Design Thinking with AI by IDEO
- OpenAI API Bootcamp – Udemy
- ArgoCD & Helm – Udemy
